The first question

Before starting, we have another quick check to ensure you're a person who carefully reads survey instructions.

To confirm you're paying close attention, please ignore your actual state of mind for the next question. Instead, follow the instructions below and select three response options, namely:

Select the option that includes the word "relaxed."

Select the third option in the list.

Select the first option listed.

Which of the following describes your current state of mind?

I feel focused

I feel tired

I feel happy

I feel low

I feel relaxed

I feel stressed

None of the above

I prefer not to answer

[Page break]

Daylight saving time

Please explain: What is your opinion about the yearly switch to daylight saving time? Do you like or dislike it? Please use about 15-30 words.

[Page break]

Main part

What follows is the main part of this survey which is about **your thoughts and expectations** regarding how the future might look.

In some of the following questions, we will ask you to think about the **percent chance** or **probability** of something happening in the future. Your answers can range from 0 to 100, where 0 means there is absolutely no chance, and 100 means that it is absolutely certain.

For example, numbers like:

- 2 and 5 percent may indicate “almost no chance”
- 18 percent or so may mean “not much chance”
- 47 or 52 percent chance may be a “pretty even chance”
- 83 percent or so may mean a “very good chance”
- 95 or 98 percent chance may be “almost certain”

[Page break]

The future temperature on Saturn

Now, please think about the future development of the **temperature on Saturn**.

The **temperature of Saturn** refers to the average surface temperature on the planet over time.

What do you think is the percent chance that Saturn's temperature will rise over the next 10 years?

%

Did you have an expectation about the chance that Saturn's temperature will rise already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

The Malaysia Super League

Now, please think about the ongoing **season of KL City FC in the Malaysia Super League**.

The **Super League** is the top national soccer league for men in Malaysia. **KL City FC** is a soccer club from Kuala Lumpur. Winning the league means finishing the season with the highest number of points.

What do you think is the percent chance that KL City FC will win the national league in the ongoing season?

%

Did you have an expectation about the chance that KL City will win the league already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Mortality

Now, please think about your **own life**.

What do you think is the percent chance that you will die someday?

%

Did you have an expectation about the chance that you will die someday already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Existence of god

Now, please think about the **existence of god**.

What do you think is the percent chance that god exists?

 %

Did you have an expectation about the chance that god exists already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Troisdorf's tax policy

Now, please think about the future local **business tax rate in Troisdorf**, a small town in Germany.

The **business tax rate** in a municipality is a legally set percentage of corporate profits that businesses must pay to the municipality.

What do you think is the percent chance that Troisdorf will reduce its corporate tax rate in the next 12 months?

 %

Did you have an expectation about the chance that Troisdorf's future corporate tax rate will rise already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Shape of the Earth

Now, please think about the **shape of the planet Earth**.

The **Earth's shape** describes its physical form. Some people claim that the Earth is flat, rather than round (or spherical).

What do you think is the percent chance that the Earth is flat?

%

Did you have an expectation about the chance that the Earth is flat already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

How do you describe yourself?

Male

Female

Non-binary / third gender

Prefer to self-describe

Prefer not to say

What is your age?

In which state do you currently reside?

What is the highest level of education you have completed?

12th grade or less

Graduated high school or equivalent

Some college, no degree

Associate degree

Bachelor's degree

Post-graduate degree

What was your annual household income in 2024 in US dollars **after** taxes and deductions?

Note: The household income is the total amount of money earned by every member of your household.

Welcome

Before we begin the survey, we have an important question for you. In studies like ours, it's crucial that participants carefully read each question, as quickly clicking through without paying attention can compromise the quality of the research. To demonstrate that you are carefully reading the survey, please make an exception and, instead of answering the next question, follow the instructions below to answer it.

First, select the option that mentions "relaxed."

Then, choose the option that is listed third.

Finally, select the option that appears first in the list.

Which of the following describes your current state of mind?

I feel focused	☐
I feel tired	☐
I feel happy	☐
I feel low	☐
I feel relaxed	☐
I feel stressed	☐
None of the above	☐
I prefer not to answer	☐

[Page break]

Please confirm

Response quality is important for the quality of this research project. For this reason, we may reject respondents

- who speed through the survey
- who use bots or artificial intelligence (AI, e.g. ChatGPT or Google Gemini)

You don't need these AI tools anyway. This survey is all about your own views and thoughts. Please just share them with us.

Please respond carefully to this survey.

I confirm	☐

[Page break]

The inflation rate

The **expected inflation rate in the US** is the percentage change in the general price level of goods and services in the US that you expect over a given period. It reflects the rate at which prices are rising (or falling) in the US and indicates changes in the purchasing power of money.

What do you expect the inflation rate in the US to be over the next 12 months?

 %

[Page break]

Please take 5 minutes to inform yourself about the future inflation rate in the US online and answer the questions below. You can use a separate browser window to browse the internet and return to the survey in approximately 5 minutes.

We will ask you again about your expectations about future inflation later in the survey. Informing yourself about future inflation will prepare you for this task.

Please paste links to the websites that you visited during your online search below. Separate links with a comma or paragraph break.

Please summarize what you have learned. Use your own words.

[Page break]

What do you think will be the main drivers of inflation in the US over the next 12 months?

Please write at least 10 words.

[Page break]

We would like to ask you again about the expected inflation rate.

What do you expect the inflation rate in the US to be over the next 12 months?

%

[Page break]

In this question we present you with eight possible scenarios for the inflation rate in the US over the next 12 months. Please let us know how likely you think it is that each scenario will occur.

Please type in the number to indicate the probability (in percent) that you attach to each scenario. The probabilities of the scenarios have to sum up to 100 percent.

The inflation rate in the US over the next 12 months will be...

Scenario 1: ...more than 20%	0 %
Scenario 2: ...between 10% and 20%	0 %
Scenario 3: ...between 5% and 10%	0 %
Scenario 4: ...between 0% and 5%	0 %
Scenario 5: ...between -5% and 0%	0 %
Scenario 6: ...between -10% and -5%	0 %
Scenario 7: ...between -20% and -10%	0 %
Scenario 8: ...less than -20%	0 %
Total	0 %

2.2 Wave 2

Welcome!

In this survey, we ask you about **your thoughts and expectations** regarding the future.

[Page break]

Do you consent to the processing of your data and our privacy policy?

Who is responsible for the study?

Responsible for the execution of the study and, therefore, for the processing of your data is:

Felix Chopra
Frankfurt School of Finance & Management gGmbH

Adickesallee 32-34
60322 Frankfurt am Main
Phone: +49 69 154008-0
Email: f.chopra@fs.de

Data protection officer: datenschutzbeauftragter@fs.de

What is the purpose of the study?

This study aims to improve our understanding of human behavior and reasoning in economic contexts.

What happens to my data?

All participating employees and scientists work in accordance with the provisions of the Data Protection Regulation, the Federal Data Protection Act, and the relevant State Data Protection Acts. The legal basis for processing your personal data is Art. 6(1)(a) GDPR. For this project, we cooperate with research institutions, universities, or laboratories based in and outside the EU. For the study, we use Qualtrics' management platform. Your data may also be processed in the USA. A transfer of your data takes place in accordance with Art. 46(2)(c) GDPR on the basis of the so-called standard contractual clauses of the European Commission.

For this study, we may collect "special categories of personal data," in particular data revealing migration background (racial or ethnic origin – term according to Art. 9 GDPR), political opinions, or philosophical beliefs, which we use only for research purposes and solely with your consent. The legal basis for processing your special categories of personal data is Art. 9(2)(a) GDPR.

Which rights do I have?

You have the right to obtain information about the personal data stored about you (Art. 15 GDPR). Should incorrect data be processed, you have the right to rectification (Art. 16 GDPR). When the legal requirements are met, you have the right to request the deletion or restriction of the processing and submit an objection against the processing of your data (Art. 17, 18 and 21 GDPR). You have the right to revoke any consent given to us at any time with effect for the future. You have the right to complain to the competent data protection authority: The Hessian Commissioner for Data Protection and Freedom of Information, PO Box 3163, 65021 Wiesbaden.

How long will my data be stored?

After the study is completed, all characteristics that can be used to establish a personal reference, including voice recordings, are deleted. We only keep text transcriptions of your recordings.

Your participation in our study is voluntary. If you refuse to participate, you will not suffer any disadvantages.

Declaration of Consent

I hereby consent to the processing of my personal data to conduct the study to improve the understanding of human behavior in an economic context and also to the disclosure of my personal data to research institutions, universities, or laboratories. I can withdraw my consent at any time. I agree that my consent also extends to special categories of personal data.

☐ I have read the above and consent to take part in this study

[Privacy](#) - [Terms](#)

[The order of the stock return block and the inflation rate block is randomized. The order of the three categorical response options is randomly flipped for each participant. The confidence question refers to the estimate a respondent made on the previous page.]

The future stock market return

Now, please think about the future development of the **US stock market**.

The **return of the US stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the US stock market. It includes both dividends and capital gains/losses. A positive return means the value increases; a negative return means the value decreases.

What do you expect the return of the US stock market to be over the next 12 months?

%

Did you have an expectation about the future stock market return already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Previously, you stated that you expect that the **future return of the US stock market** will be **5%** over the next 12 months. How **confident** are you in this estimate?

What do you think is the probability, in percent, that the actual future return of the US stock market will be somewhere between **1% and 9%**?

%

[Page break]

The future inflation rate

Now, please think about the future development of **prices for goods and services in the US**.

The **inflation rate** is the percent change over a given period in the general price level of goods and services. It reflects the rate at which prices are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

What do you expect the US inflation rate to be over the next 12 months?

%

Did you have an expectation about the future inflation rate already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Previously, you stated that you expect that **the future US inflation rate** will be **3%** over the next 12 months. How **confident** are you in this estimate?

What do you think is the probability, in percent, that the actual future US inflation rate will be somewhere between **2% and 4%**?

%

Condition: Distribution inflation

The future inflation rate

Please think about the future development of **prices for goods and services in the US**.

The **inflation rate** is the percent change over a given period in the general price level of goods and services. It reflects the rate at which prices are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

In your view, what would you say is the percent chance that, over the next 12 months...

Your answers have to sum to 100 across all events.

The rate of inflation will be 12% or higher.	0 %
The rate of inflation will be between 8% and 12%.	0 %
The rate of inflation will be between 4% and 8%.	0 %
The rate of inflation will be between 2% and 4%.	0 %
The rate of inflation will be between 0% and 2%.	0 %
The rate of inflation will be between 0% and -2%.	0 %
The rate of inflation will be between -2 % and -4%.	0 %
The rate of inflation will be between -4 % and -8%.	0 %
The rate of inflation will be between -8 % and -12%.	0 %
The rate of inflation will be -12% or lower.	0 %
Total	0 %

Did you have an expectation about the future US inflation rate already before starting today's survey, or did you form your expectation only during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation only during today's survey.

Condition: Distribution stock returns

The future return of the US stock market

Please think about the future development of the **US stock market**.

The **return of the US stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the US stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

In your view, what would you say is the percent chance that, over the next 12 months...

Your answers have to sum to 100 across all events.

The return of the US stock market will be more than 30%	0 %
The return of the US stock market will be between 20% and 30%	0 %
The return of the US stock market will be between 10% and 20%	0 %
The return of the US stock market will be between 0% and 10%	0 %
The return of the US stock market will be between -10% and 0%	0 %
The return of the US stock market will be between -20% and -10%	0 %
The return of the US stock market will be between -30% and -20%	0 %
The return of the US stock market will be less than -30%	0 %
Total	0 %

Did you have an expectation about the future return of the US stock market already before starting today's survey, or did you form your expectation only during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation only during today's survey.

4 Main descriptive survey

Welcome!

This study is designed for **desktop computer (PC or Mac) users only**. If you are accessing this study on a smartphone or tablet, switch to a desktop computer and enter the study again, or leave the survey.

You will also need a second mobile device (phone or tablet) for authentication - please keep it ready.

Do you consent to the processing of your data?

The goal of this research study is to better understand how people make important economic choices and why they make their choices.

Survey respondents will answer a series of questions on their views. Your participation is completely voluntary. You can withdraw at any time, and for any reason, simply by closing your browser. However, we are only able to pay you if you complete the survey.

If you require further information, please contact wohlfart@wiso.uni-koeln.de.

☐ I have read the above and consent to take part in this study

☐ I do not wish to participate

Please confirm

Response quality is important for the quality of this research project. For this reason, we will review responses and reject respondents who

- speed through the survey
- submit invalid data
- use bots or artificial intelligence (AI, e.g. ChatGPT or Google Gemini)

You don't need these AI tools anyway. This survey is all about your own views and thoughts.

Please respond carefully to this survey.

Authentication

To help us prevent bots and automated programs from participating in this study, we ask you to verify your participation using a second device.

Here's how it works:

On the next page, a QR code will appear. Please scan it with a second device (such as a smartphone or tablet). This will open a secure webpage on that device, confirming your participation. Because scanning a QR code requires human action, this helps us verify that you are a real person.

You can complete this step only once, and it must be done within 60 seconds. It is required in order to continue with the survey.

The first question

Before starting, we have another quick check to ensure you're a person who carefully reads survey instructions.

To confirm you're paying close attention, please ignore your actual state of mind for the next question. Instead, follow the instructions below and select three response options, namely:

Select the option that includes the word "relaxed."

Select the third option in the list.

Select the first option listed.

Which of the following describes your current state of mind?

I feel focused

I feel tired

I feel happy

I feel low

I feel relaxed

I feel stressed

None of the above

Main part

What follows is the main part of this survey which is about **your thoughts and expectations** regarding how the future might look.

In some of the following questions, we will ask you to think about the **percent chance** or **probability** of something happening in the future. Your answers can range from 0 to 100, where 0 means there is absolutely no chance, and 100 means that it is absolutely certain.

For example, numbers like:

- 2 and 5 percent may indicate “almost no chance”
- 18 percent or so may mean “not much chance”
- 47 or 52 percent chance may be a “pretty even chance”
- 83 percent or so may mean a “very good chance”
- 95 or 98 percent chance may be “almost certain”

[Page break]

Your future unemployment risk

Now, please think about **your future unemployment risk**.

Being unemployed means that you do not have a job but are actively looking for a job.

What do you think is the percent chance that you will be unemployed in 12 months from now?

 %

Did you have an expectation about your future unemployment risk already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your reasoning

Earlier you indicated that you already had **an expectation** about **your future unemployment risk** before participating in today's survey.

Please explain why you had an expectation before participating in today's survey.

We are not asking you to justify your estimate, but rather to describe *why* you had an expectation before taking the survey.

This is a particularly important question in our study. Please take your time and answer thoughtfully.

[Page break]

Your confidence

Previously, you stated the expectation that the **chance that you will be unemployed in 12 months from now is 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future chance that you will be unemployed is somewhere between **0% and 10%**?

 %

[Page break]

The future US unemployment rate

Now, please think about the **future US unemployment rate**.

The **unemployment rate** is the percentage of the labor force who do not have a job. (The labor force includes those who are either employed or unemployed but actively seeking work.)

What do you expect the unemployment rate in the United States to be in 12 months from now?

 %

Did you have an expectation about the future US unemployment rate already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **US unemployment rate in 12 months from now will be 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future US unemployment rate will be somewhere between 1% and 3%?

 %

[Page break]

The future inflation rate for the goods and services that you currently purchase

Now, please think about the future development of the **prices for goods and services that you currently purchase**.

The **inflation rate for the goods and services you currently purchase** is the percent change over a given period in the price level of the goods and services you currently purchase. It reflects the rate at which prices you currently pay are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

What do you expect the inflation rate for the goods and services you currently purchase to be over the next 12 months?

%

Did you have an expectation about the future inflation rate for the goods and services that you currently purchase already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **inflation rate for the goods and services that you currently purchase over the next 12 months will be 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future inflation rate for the goods and services that you currently purchase will be somewhere between **1% and 3%**?

%

[Page break]

The likelihood of a 30% US stock market crash

Now, please think about the future development of the **US stock market**.

The **return of the US stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the US stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

What do you think is the percent chance that the return of the US stock market over the next 12 months will be lower than -30%? This would mean that a US stock market portfolio would lose more than 30% of its value.

 %

Did you have an expectation about the likelihood of a 30% US stock market crash already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **chance of a 30% US stock market crash over the next 12 months is 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual chance of a future 30% stock market crash is somewhere between **0% and 10%**?

 %

[Page break]

The future federal funds rate

Now, please think about the future **US federal funds rate**.

The **federal funds rate** is the most important interest rate in the economy, and it is frequently discussed in the news. The federal funds rate is controlled by the Federal Reserve (Fed). The value of the rate influences how “costly” it is for banks to acquire money, thereby influencing interest rates on important financial products, such as savings accounts, consumer loans, mortgages, or loans to firms.

What do you expect the US federal funds rate to be in 12 months from now?

 %

Did you have an expectation about the future federal funds rate already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **federal funds rate in 12 months from now will be 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future federal funds rate will be somewhere between 1% and 3%?

 %

[Page break]

Your future household income

Now, please think about the future development of **your total monthly household income**.

Your **total household income** is the combined gross income, in dollars, earned by all members living in your household (including you, but excluding roommates and renters) over a specific period of time. Please consider income from all sources before taxes and transfers.

By how much (in percent) do you expect your total monthly household income to change over the next 12 months? A positive rate means that you expect your monthly household income to increase; a negative rate means that you expect it to decrease.

%

Did you have an expectation about the future development of your household income already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **change of your monthly household income over the next 12 months will be 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future change of your household income will be somewhere between 0% and 4%?

%

[Page break]

Your mortality risk

Now, please think about your **risk of dying before reaching the age of 65**.

What do you think is the percent chance that you will die before the age of 65?

 %

Did you have an expectation about your mortality risk before the age of 65 already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that your **chance of dying before the age of 65 is 2%**. How **confident** are you in this estimate?

What do you think is the probability that your actual chance of dying before the age of 65 is somewhere between **0% and 10%**?

 %

[Page break]

The future return of your own stock portfolio

Now, please think about the future development of your **own stock portfolio**: the stocks, exchange-traded funds (ETFs), and stock mutual funds you hold.

The **return of your own stock portfolio** is the change in value, in percent, that you receive over a given period from your stock portfolio. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

What do you expect the return of your own stock portfolio to be over the next 12 months?

%

Did you have an expectation about the future return of your own stock portfolio already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **return of your own stock portfolio over the next 12 months will be 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future return of your own stock portfolio will be somewhere between **0% and 4%**?

%

[Page break]

What others think about paying taxes

Now, please think about **what other people in the US think about paying taxes**.

Out of 100 people in the US, how many do you think believe that people should pay their fair share of taxes, even if they could get away with cheating?

out of 100 people

Did you have an expectation about what others think about paying taxes already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **share of people who believe that everybody should pay their fair share of taxes is 2 out of 100 people**. How confident are you in this estimate?

What do you think is the probability that the actual share of people who believe that everybody should pay their fair share of taxes is somewhere between **0 out of 100 people and 10 out of 100 people**?

%

[Page break]

Income inequality: share of income of top 10%

Net income is defined as the income a household has available after deducting taxes and adding transfers.

Now, please think about **inequality of net income in the US**.

Income inequality can be measured by the **share of total net income earned by the 10% of households with the highest net income** in the United States.

What do you think is the share of total net income earned by the 10% of US households with the highest net income?

%

Did you have an expectation about inequality of net income already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **share of total net income earned by the 10% of US households with the highest net income is 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual share of total net income earned by the 10% of US households with the highest net income is somewhere between **0% and 4%**?

%

[Page break]

Share of people with lower income

Now, please think about the income distribution in the US in 2024.
Please consider total income in 2024 from all sources before taxes and transfers.

Which share of adults in the US had a lower income in 2024 than you?

%

Did you have an expectation about the share of people with lower income than yours already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the share of people with lower income than yours is 2%. How confident are you in this estimate?
What do you think is the probability that the actual share of people with lower income than yours is somewhere between 0% and 10%?

%

[Page break]

The future annual percentage rates on credit cards

Now, please think about the future **average annual percentage rate (APR) on credit cards in the US**.

The **annual percentage rate on credit card debt** is the interest rate that consumers pay when carrying a balance on their credit card over one full year. This rate varies based on individual creditworthiness. Here, we are interested in the average rate across all credit card holders in the US.

What do you expect the average annual percentage rate on credit cards in the US to be in 12 months from now?

%

Did you have an expectation about the average future percentage rate on credit cards already before starting today's survey, or did you form your expectation during today's survey?

- I had a pretty precise expectation already before today's survey.
- I had a rough expectation already before today's survey.
- I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **average annual percentage rate on credit cards in 12 months from now will be 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future average annual percentage rate on credit cards will be somewhere between **1% and 3%**?

%

[Page break]

Your retirement

Now, please think about your **future retirement age**.

Retirement means that you permanently stop working for pay or substantially reduce working hours, relying primarily on retirement income or savings.

What do you think is the percentage chance that you will retire before the age of 65?

%

Did you have an expectation about your chance of retiring before the age of 65 already before starting today's survey, or did you form your expectation during today's survey?

- I had a pretty precise expectation already before today's survey.
- I had a rough expectation already before today's survey.
- I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that your **chance of retiring before the age of 65** is **30%**. How **confident** are you in this estimate?

What do you think is the probability that your actual chance of retiring before the age of 65 is somewhere between **25%** and **35%**?

%

[Page break]

Global warming

Now, please think about **global warming**.

Global warming refers to the idea that the world's average temperature has been increasing over the past 150 years, may be increasing more in the future, and that the world's climate may change as a result.

What do you think is the percent chance that global warming is happening?

%

Did you have an expectation about the chance that global warming is happening already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **chance that global warming is happening is 100%**. How **confident** are you in this estimate?

What do you think is the probability that the actual chance that global warming is happening is somewhere between **90% and 100%**?

%

[Page break]

Wealth inequality: share of wealth of top 10%

Now, please think about **wealth inequality in the US**.

Wealth inequality can be measured by the **share of total net wealth owned by the wealthiest 10% of households** in the United States.

What do you think is the share of total net wealth owned by the wealthiest 10% of US households?

%

Did you have an expectation about wealth inequality already before starting today's survey, or did you form your expectation during today's survey?

- I had a pretty precise expectation already before today's survey.
- I had a rough expectation already before today's survey.
- I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **share of total net wealth owned by the wealthiest 10% is 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual share of total net wealth owned by the wealthiest 10% is somewhere between **0% and 4%**?

%

[Page break]

The effect of college education on future income

Now, please think about the **effect of completing a college education on future income**.

Consider a typical high school student in the United States with average intelligence, skills, motivation, and work ethic. Imagine two scenarios:

Complete high school: The person completes high school by finishing their senior year and earning their high school diploma, but does not pursue any further education.

Complete college: The person continues their education, completes at least their senior year of college, and earns a bachelor's degree.

How much higher (in percent) do you expect annual income at age 40 to be if the person completes college compared to only completing high school?

%

Your response reveals your expectation about the effect of college education on future income.

Did you have an expectation about the effect of college education on future income already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **percentage increase in annual income at age 40 if a person completes college compared to only completing high school is 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual percentage increase in future income if a person completes college compared to only completing high school is somewhere between **-3% and 7%**?

%

[Page break]

Your chances of finding a new job

Suppose you are actively looking for a new job. If you are currently employed, suppose you leave your current job.

Now, please think about your future **chances of finding a new job**.

What do you think would be the percent chance that, within the next 3 months, you will find a new job that you will accept, considering the pay and type of work?

 %

Did you have an expectation about your future chance of finding a new job already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that your **chance of finding a new job within the next 3 months is 2%**. How **confident** are you in this estimate?

What do you think is the probability that your actual future chance of finding a new job is somewhere between **0% and 10%**?

 %

[Page break]

Economic mobility

Now, please think about **economic mobility** in the US.

Consider **children who are born into the bottom 20% of households in terms of income**, that is, the poorest fifth of households in the US.

Once these children grow up and form their own households, how many out of 100 do you think will make it from the bottom 20% to the top 20% of households?

out of 100 children

Your response reveals your expectation about the degree of economic mobility in the US.

Did you have an expectation about economic mobility already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **share of children who will make it from the bottom 20% to the top 20% of households is 2 out of 100 children**. How **confident** are you in this estimate?

What do you think is the probability that the actual share of children who will make it from the bottom 20% to the top 20% of households is somewhere between **0 out of 100 children and 10 out of 100 children**?

%

[Page break]

The future Gross Domestic Product

Now, please think about the future development of the **US Gross Domestic Product (GDP)**.

The total output of the US economy is measured by the **GDP (in USD)**, which is defined as the value of all goods and services produced within the US over a specific period of time.

By how much (in percent) do you expect the annual GDP in the US to change over the next 12 months? A positive rate means that you expect the GDP to increase; a negative rate means that you expect it to decrease.

%

Did you have an expectation about the future development of the Gross Domestic Product already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **change of the annual Gross Domestic Product over the next 12 months will be 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future change of the Gross Domestic Product will be somewhere between **1% and 3%**?

%

[Page break]

The likelihood of a recession

Now, please think about the future development of the **US Gross Domestic Product**.

The total output of the US economy is measured by the **Gross Domestic Product (GDP)**, which is defined as the value of all goods and services produced within the US over a specific period of time.

A **recession** entails a fall of real (price-adjusted) GDP which means that in a given quarter the economy produces fewer goods and services than in the preceding quarter. A fall of real GDP is normally reflected in a decline of real income, employment, industrial production, and wholesale-retail sales.

What do you think is the percent chance that real US GDP will fall in the third quarter of 2025 relative to the second quarter of 2025?

 %

Did you have an expectation about the likelihood of a future recession already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **chance of a fall of real US GDP in the third quarter relative to the second quarter of 2025 is 2%**. How **confident** are you in this estimate?

What do you think is the probability that the actual chance of a future fall of real GDP is somewhere between **0% and 10%**?

 %

[Page break]

Your morbidity risk

Now, please think about your risk of becoming so ill or disabled that you are permanently unable to work before reaching the age of 65.

What do you think is the percent chance that you will become permanently unable to work before reaching the age of 65?

 %

Did you have an expectation about your morbidity risk before the age of 65 already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that your chance of becoming permanently unable to work before the age of 65 is 2%. How confident are you in this estimate?

What do you think is the probability that your actual chance of becoming permanently unable to work before the age of 65 is somewhere between 0% and 10%?

 %

[Page break]

Your life expectancy

Now, please think about your life expectancy.

About how long do you think you will live? Please indicate the age that you expect to reach.

 years

Did you have an expectation about the age you will reach already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **age you will reach is 80 years**. How **confident** are you in this estimate?

What do you think is the probability that the actual the age you will reach is somewhere between **79 years and 81 years**?

 %

[Page break]

The future inflation rate

Now, please think about the future development of **prices for goods and services in the US**.

The **inflation rate** is the percent change over a given period in the general price level of goods and services. It reflects the rate at which prices are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

What do you expect the **US inflation rate to be over the next 12 months**?

 %

Did you have an expectation about the future **US inflation rate** already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **US inflation rate over the next 12 months will be 30%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future US inflation rate will be somewhere between **29% and 31%**?

 %

[Page break]

What others think about race equality

Now, please think about **what other people in the US think about race equality**.

Out of 100 people in the US, how many do you think believe that people of all races should be treated equally?

 out of 100 people

Did you have an expectation about what others think about race equality already before starting today's survey, or did you form your expectation during today's survey?

- I had a pretty precise expectation already before today's survey.
- I had a rough expectation already before today's survey.
- I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **share of people who believe that people of all races should be treated equally is 80 out of 100 people**. How **confident** are you in this estimate?

What do you think is the probability that the actual share of people who believe that people of all races should be treated equally is somewhere between **75 out of 100 people and 85 out of 100 people**?

 %

[Page break]

The future return of the US stock market

Now, please think about the future development of the **US stock market**.

The **return of the US stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the US stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

What do you expect the return of the US stock market to be over the next 12 months?

 %

Did you have an expectation about the future return of the US stock market already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **return of the US stock market over the next 12 months will be 12%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future return of the US stock market will be somewhere between **8% and 16%**?

 %

[Page break]

What others think about gender roles

Now, please think about **what other people in the US think about gender roles**.

Out of 100 people in the US, how many do you think believe that men and women should have equal roles in the workplace?

out of 100 people

Did you have an expectation about what others think about gender roles already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **share of people who believe that men and women should have equal roles in the workplace is 90 out of 100 people**. How **confident** are you in this estimate?

What do you think is the probability that the actual share of people who believe that men and women should have equal roles in the workplace is somewhere between **85 out of 100 people and 95 out of 100 people**?

%

[Page break]

The future annual percentage rates on savings accounts

Now, please think about the future **average annual percentage rate on savings accounts in the US**.

Savings account percentage rates are the annual interest rates, in percent, that banks pay to consumers for keeping money in a savings account. These rates can vary across banks and account types. Here, we are interested in the average percentage rate across all savings accounts in the US.

What do you expect the average annual percentage rate on savings accounts to be in 12 months from now?

 %

Did you have an expectation about the average future percentage rate on savings accounts already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **average annual percentage rate on savings accounts in 12 months from now will be 23%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future average annual percentage rate on savings accounts will be somewhere between **22% and 24%**?

 %

[Page break]

The average annual pay of future job offers

Suppose you are actively looking for a new job. If you are currently employed, suppose you leave your current job.

Now, please think about the **(pre-tax) pay of the job offers** that you may receive within the coming three months.

What do you expect the average annual pre-tax pay for these offers to be for the first year?

\$

Did you have an expectation about the average annual pay of future job offers already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **average annual pre-tax pay of job offers for the first year you may receive in the next 3 months will be \$1200**. How confident are you in this estimate?

What do you think is the probability that the actual average annual pre-tax pay of future job offers for the first year will be somewhere between **\$1140 and \$1260**?

%

[Page break]

The gender wage gap

Now, please think about the (pre-tax) wages of men and women in the US.

Please think of all individuals in the US, men and women, with the same age, education, and working hours.

How many dollars, do you think, does a woman make on average for every \$100 made by a man with the same characteristics? An answer below 100 means that you expect women to earn less than men; an answer above 100 means that you expect women to earn more than men.

\$

Your response reveals your expectation about the gender wage gap in the US.

Did you have an expectation about the gender wage gap already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **dollar amount a woman makes on average for every \$100 made by a man with the same characteristics is \$12**. How **confident** are you in this estimate?

What do you think is the probability that the actual dollar amount a woman makes on average for every \$100 made by a man with the same characteristics is somewhere between **\$10 and \$14**?

%

[Page break]

Future value of your home

Now, please think about the future development of the **value of your home**. If you are currently renting, please think about the future development of the value of the home you live in. By value, we mean how much your home would approximately sell for.

The **growth rate of your home's value** is the change in its value, in percent, over 12 months. A positive growth rate means that your home increases in value; a negative rate means that it decreases.

What do you expect the growth rate of your home's value to be over the next 12 months?

 %

Did you have an expectation about the future development of your home's value already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **change of your home's value over the next 12 months will be 12%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future change of your home's value will be somewhere between **10% and 14%**?

 %

Your household's economic background

On the next pages, we will ask you a series of questions on your household's economic background. They are extremely important for the research project. So please take your time and respond carefully.

By "household", we mean everyone who usually lives with you in your primary residence, including yourself, but excluding roommates and renters.

Of how many people does your household consist?

[Page break]

Your household's savings and debt

The next questions are about your current household savings and debt. Please indicate how much savings and debt your household currently holds.

Savings

Savings in cash and checking accounts

The total value of your financial savings held in cash and checking accounts. \$

Savings in savings accounts

The total value of your financial savings invested in savings accounts. \$

Stock investment

The total value of your stock portfolio, including, individual stocks, exchange-traded funds (ETFs), and stock mutual funds. \$

Other withdrawable financial savings

The total value of your other withdrawable financial savings and investments, such as money market funds, government/municipal bonds or treasury bills, bonds in publicly held corporations, or bond mutual funds. \$

Currently non-withdrawable financial savings

The total value of your currently non-withdrawable financial savings and investments, such as the value of your retirement accounts (401(k)s, IRAs, thrift accounts, and future pensions), the cash value of life insurance policies, certificates of deposit, and saving bonds. \$

Real estate

The total value of the land and real estate your household owns, including your primary residence, second homes and other real estate. \$

Total \$

Debt

Credit card debt

Total outstanding carried-over balances on credit cards (including retail cards). \$

Housing debt

Housing debt such as mortgages and home equity loans. \$

Other debt

Other outstanding debt, such as student loans, auto loans, or other personal loans. \$

Total \$

Please double-check if your responses above are correct.

[Page break]

Think about your **household spending in a typical month**. Spending includes all money spent on goods and services, including rent. Goods include durable goods (such as electronics, furniture, or car maintenance) and nondurable goods (such as groceries, vacations, or gasoline).

How much does your household spend in a typical month?

\$

Assume that your household's car broke down and the repair costs \$1,000. How difficult would it be for your household to take out a loan to finance this repair?

Very difficult

Somewhat difficult

Neither easy nor difficult

Somewhat easy

Very easy

Did you buy or sell any stocks or stock mutual funds in the last three months?

Yes

Main part

What follows is the main part of this survey which is about **your thoughts and expectations** regarding how the future might look.

In some of the following questions, we will ask you to think about the **percent chance** or **probability** of something happening in the future. Your answers can range from 0 to 100, where 0 means there is absolutely no chance, and 100 means that it is absolutely certain.

For example, numbers like:

- 2 and 5 percent may indicate "almost no chance"
- 18 percent or so may mean "not much chance"
- 47 or 52 percent chance may be a "pretty even chance"
- 83 percent or so may mean a "very good chance"
- 95 or 98 percent chance may be "almost certain"

[Page break]

The future Bank Rate

Now, please think about the future **UK Bank Rate**.

The Bank Rate is the most important interest rate in the economy, and it is frequently discussed in the news. The Bank Rate is set by the Bank of England (BoE). The value of the rate influences how "costly" it is for banks to acquire money, thereby influencing interest rates on important financial products, such as savings accounts, consumer loans, mortgages, or loans to firms.

What do you expect the UK Bank Rate to be in 12 months from now?

%

Did you have an expectation about the UK Bank Rate already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

The future inflation rate

Now, please think about the future development of **prices for goods and services in the UK**.

The **inflation rate** is the percent change over a given period in the general price level of goods and services. It reflects the rate at which prices are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

What do you expect the UK inflation rate to be over the next 12 months?

%

Did you have an expectation about the future UK inflation rate already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

The future inflation rate for the goods and services that you currently purchase

Now, please think about the future development of the **prices for goods and services that you currently purchase**.

The **inflation rate for the goods and services you currently purchase** is the percent change over a given period in the price level of the goods and services you currently purchase. It reflects the rate at which prices you currently pay are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

What do you expect the inflation rate for the goods and services you currently purchase to be over the next 12 months?

%

Did you have an expectation about the future inflation rate for the goods and services that you currently purchase already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

The likelihood of a recession

Now, please think about the future development of the **UK Gross Domestic Product**.

The total output of the UK economy is measured by the **Gross Domestic Product (GDP)**, which is defined as the value of all goods and services produced within the UK over a specific period of time.

A **recession** entails a fall of real (price-adjusted) GDP which means that in a given quarter the economy produces fewer goods and services than in the preceding quarter. A fall of real GDP is normally reflected in a decline of real income, employment, industrial production, and wholesale-retail sales.

What do you think is the percent chance that real UK GDP will fall in the fourth quarter of 2025 relative to the third quarter of 2025?

%

Did you have an expectation about the likelihood of a future recession already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

The future return of the UK stock market

Now, please think about the future development of the **UK stock market**.

The **return of the UK stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the UK stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

What do you expect the return of the UK stock market to be over the next 12 months?

%

Did you have an expectation about the future return of the UK stock market already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

[Page break]

The future Gross Domestic Product

Now, please think about the future development of the **UK Gross Domestic Product (GDP)**.

The total output of the UK economy is measured by the **GDP (in GBP)**, which is defined as the value of all goods and services produced within the UK over a specific period of time.

By how much (in percent) do you expect the annual GDP in the UK to change over the next 12 months? A positive rate means that you expect the GDP to increase; a negative rate means that you expect it to decrease.

%

Did you have an expectation about the future development of the Gross Domestic Product already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

Primera pregunta

Antes de comenzar, tenemos una pequeña verificación más para asegurarnos de que sos una persona que lee atentamente las instrucciones.

Para confirmar que estás prestando atención, ignorá cómo te sentís realmente en la próxima pregunta. En su lugar, seguí las siguientes instrucciones y seleccioná tres opciones de respuesta, a saber:

Seleccioná la opción que contenga la palabra "relajado".

Seleccioná la tercera opción de la lista.

Seleccioná la primera opción que aparece.

¿Cuál de las siguientes describe tu estado de ánimo actual?

Me siento enfocado(a)
Me siento cansado(a)
Me siento feliz
Me siento desanimado(a)
Me siento relajado(a)
Me siento estresado(a)
Ninguna de las anteriores
Prefiero no responder

Parte principal

A continuación comienza la parte principal de esta encuesta, que trata sobre **tus ideas y expectativas** respecto a cómo podría ser el futuro.

En algunas de las próximas preguntas, te pediremos que pienses en el **porcentaje o probabilidad** de que algo ocurra en el futuro. Tus respuestas pueden ir de 0 a 100, siendo 0 que no hay ninguna posibilidad, y 100 que es absolutamente seguro.

Por ejemplo, números como:

- 2 o 5 por ciento pueden indicar "casi ninguna probabilidad"
- Alrededor de 18 por ciento puede significar "poca probabilidad"
- 47 o 52 por ciento puede significar "una probabilidad bastante igualada"
- Cerca de 83 por ciento puede significar "muy buena probabilidad"
- Una probabilidad de 95 o 98 por ciento puede significar "casi seguro"

[Page break]

La futura tasa repo overnight de Argentina

Ahora, pensá en la futura **tasa repo overnight de Argentina**.

La **tasa repo overnight de Argentina** es la tasa de interés más importante de la economía y, con frecuencia, se menciona en las noticias. La tasa repo overnight de Argentina es definida por el Banco Central de la República Argentina (BCRA). El valor de esta tasa influye en qué tan "costoso" resulta para los bancos obtener dinero, afectando así las tasas de interés de productos financieros clave, como las cuentas de ahorro, los préstamos personales, los créditos hipotecarios o los préstamos a empresas.

¿Cuál esperás que sea la tasa repo overnight de Argentina dentro de 12 meses?

 %

¿Ya tenías una expectativa sobre la futura tasa repo overnight de Argentina antes de comenzar esta encuesta, o formaste tu expectativa durante esta?

Formé mi expectativa durante esta encuesta.

Ya tenía una expectativa aproximada antes de esta encuesta.

Ya tenía una expectativa bastante precisa antes de esta encuesta.

[Page break]

La tasa de inflación futura

Ahora, pensá en la evolución futura de los **precios de bienes y servicios en Argentina**.

La **tasa de inflación** es el cambio porcentual durante un periodo determinado en el nivel general de precios de los bienes y servicios. Refleja el ritmo al que los precios suben (o bajan) e indica los cambios en el poder adquisitivo del dinero. Una tasa de inflación positiva significa que los precios aumentan; una tasa de inflación negativa significa que los precios disminuyen.

¿Cuál esperás que sea la tasa de inflación en Argentina durante los próximos 12 meses?

 %

¿Ya tenías una expectativa sobre la tasa de inflación futura en Argentina antes de comenzar esta encuesta, o formaste tu expectativa durante esta?

Formé mi expectativa durante esta encuesta.

Ya tenía una expectativa aproximada antes de esta encuesta.

Ya tenía una expectativa bastante precisa antes de esta encuesta.

[Page break]

La tasa de inflación futura de los bienes y servicios que consumís en la actualidad

Ahora, pensá en la evolución futura de los **precios de los bienes y servicios que vos consumís en la actualidad**.

La **tasa de inflación de los bienes y servicios que consumís en la actualidad** es el cambio porcentual durante un período determinado en el nivel de precios de esos bienes y servicios. Esta refleja el ritmo al que los precios que pagás actualmente suben (o bajan) e indica los cambios en el poder adquisitivo del dinero. Una tasa de inflación positiva significa que los precios aumentan; una tasa de inflación negativa significa que los precios disminuyen.

¿Cuál esperás que sea la **tasa de inflación de los bienes y servicios que consumís en la actualidad durante los próximos 12 meses?**

%

¿Ya tenías una expectativa sobre la **tasa de inflación futura de los bienes y servicios que consumís en la actualidad** antes de comenzar esta encuesta, o formaste tu expectativa durante esta?

Formé mi expectativa durante esta encuesta.

Ya tenía una expectativa aproximada antes de esta encuesta.

Ya tenía una expectativa bastante precisa antes de esta encuesta.

[Page break]

La probabilidad de una recesión

Ahora, pensá en la evolución futura del **producto interno bruto (PIB) de Argentina**.

El nivel total de producción de la economía argentina se mide mediante el **PIB (en ARS)**, que se define como el valor de todos los bienes y servicios producidos dentro del territorio argentino durante un período determinado.

Una **recesión** implica una caída del PIB real (ajustado por precios), lo que significa que, en un trimestre determinado, la economía produce menos bienes y servicios que en el trimestre anterior. Una caída del PIB real normalmente se refleja en una disminución del ingreso real, el empleo, la producción industrial y las ventas mayoristas y minoristas.

¿Cuál considerás que es la **probabilidad, en porcentaje, de que el PIB real de Argentina caiga en el cuarto trimestre de 2025 con respecto al tercer trimestre de 2025?**

%

¿Ya tenías una expectativa sobre la **probabilidad de una futura recesión** antes de comenzar esta encuesta, o formaste tu expectativa durante esta?

Formé mi expectativa durante esta encuesta.

Ya tenía una expectativa aproximada antes de esta encuesta.

Ya tenía una expectativa bastante precisa antes de esta encuesta.

[Page break]

El rendimiento futuro del mercado de valores argentino

Ahora, pensá en la evolución futura del **mercado de valores argentino**.

El **rendimiento del mercado de valores argentino** es el cambio en el valor, expresado en porcentaje, que se obtiene al invertir durante un período determinado en una cartera que incluya todas las acciones que cotizan en el mercado argentino. Este rendimiento incluye tanto los dividendos como las ganancias/pérdidas de capital. Un rendimiento positivo significa que el valor aumenta; un rendimiento negativo significa que el valor disminuye.

¿Cuál esperás que sea el **rendimiento del mercado accionario de valores argentino durante los próximos 12 meses?**

%

¿Ya tenías una expectativa sobre el **rendimiento futuro del mercado de valores argentino** antes de comenzar esta encuesta, o formaste tu expectativa durante esta?

Formé mi expectativa durante esta encuesta.

Ya tenía una expectativa aproximada antes de esta encuesta.

Ya tenía una expectativa bastante precisa antes de esta encuesta.

[Page break]

El futuro producto interno bruto

Ahora, pensá en la evolución futura del **producto interno bruto (PIB) de Argentina**.

El nivel total de producción de la economía argentina se mide mediante el **PIB (en ARS)**, que se define como el valor de todos los bienes y servicios producidos dentro del territorio argentino durante un período determinado.

¿En qué porcentaje esperás que cambie el **PIB anual de Argentina** durante los **próximos 12 meses?**

Nota: Una tasa positiva significa que esperás que el PIB anual aumente; una tasa negativa significa que esperás que disminuya.

%

¿Ya tenías una expectativa sobre la evolución futura del **producto interno bruto** antes de comenzar esta encuesta, o formaste tu expectativa durante esta?

Formé mi expectativa durante esta encuesta.

Ya tenía una expectativa aproximada antes de esta encuesta.

Ya tenía una expectativa bastante precisa antes de esta encuesta.

Ana bölüm

Aşağıda geleceğin nasıl görünebileceği konusunda **düşünceleriniz ve beklentileriniz** hakkında olan bu anketin ana bölümü yer almaktadır.

Aşağıdaki sorulardan bazılarında, gelecekte bir şeyin gerçekleşme **yüzde şansı veya olasılığı** üzerine düşünmenizi isteyeceğiz. Cevaplarınız 0 ile 100 arasında değişebilir; burada 0 kesinlikle hiç şans olmadığı, 100 ise kesin olduğu anlamına gelir.

Örnek olarak:

- %2 veya %5 “neredeyse imkânsız” demektir.
- %18 “pek olası değil” demektir.
- %47 ya da %52 “yarı yarıya bir ihtimal” demektir.
- %83 “büyük olasılıkla olur” demektir.
- %95 veya %98 “neredeyse kesin” demektir.

[Page break]

Gelecekteki TCMB Repo Faizi

Şimdi, gelecekteki **TCMB Repo Faizi** üzerine düşünün.

TCMB Repo Oranı ekonomideki en önemli faiz oranıdır ve haberlerde sıklıkla tartışılır. TCMB Repo Oranı, Türkiye Cumhuriyet Merkez Bankası (TCMB) tarafından kontrol edilir. Oranın değeri, bankaların para elde etmesinin ne kadar "maliyetli" olduğunu etkileyerek tasarruf hesapları, tüketici kredileri, ipotekler veya firmalara verilen krediler gibi önemli finansal ürünlerdeki faiz oranlarını etkiler.

TCMB Repo Oranının bundan 12 ay sonra ne kadar olmasını bekliyorsunuz?

%

TCMB Repo Oranının geleceği hakkında bugünkü ankete başlamadan önce bir beklentiniz var mıydı, yoksa beklentinizi bugünkü anket sırasında mı oluşturdunuz?

Bugünkü ankettten önce oldukça kesin bir beklentim vardı.

Bugünkü ankettten önce kabaca bir beklentim vardı.

Beklentimi bugünkü anket sırasında oluşturdum.

[Page break]

Gelecekteki enflasyon oranı

Şimdi **Türkiye'deki mal ve hizmet fiyatlarının** gelecekteki değişimini düşünün.

Enflasyon oranı, belirli bir dönemde fiyatların genel düzeyindeki yüzde değişimdir. Fiyatların yükselme (veya düşme) hızını yansıtır ve paranın satın alma gücündeki değişiklikleri gösterir. Pozitif bir oran fiyatların arttığını, negatif oran ise düştüğünü gösterir.

Önümüzdeki 12 ayda Türkiye'deki enflasyon oranının ne olacağını düşünüyorsunuz?

%

Türkiye'deki gelecekteki enflasyon oranı hakkında bugünkü ankete başlamadan önce bir beklentiniz var mıydı, yoksa beklentinizi bugünkü anket sırasında mı oluşturdunuz?

Bugünkü ankettten önce oldukça kesin bir beklentim vardı.

Bugünkü ankettten önce kabaca bir beklentim vardı.

Beklentimi bugünkü anket sırasında oluşturdum.

[Page break]

Şu anda satın aldığınız mal ve hizmetler için gelecekteki enflasyon oranı

Şimdi, **sizin** şu anda satın aldığınız mal ve hizmetlerin fiyatlarının gelecekteki gelişimini düşünün.

Şu anda satın aldığınız mal ve hizmetler için enflasyon oranı , şu anda satın aldığınız mal ve hizmetlerin fiyat seviyesinde belirli bir dönem boyunca meydana gelen yüzde değişimdir. Bu, şu anda ödediğiniz fiyatların yükselme (veya düşme) oranını yansıtır ve paranın satın alma gücündeki değişiklikleri gösterir. Pozitif bir oran fiyatların arttığını, negatif oran ise düştüğünü gösterir.

Şu anda satın aldığınız mal ve hizmetler için enflasyon oranının önümüzdeki 12 ay boyunca ne kadar olmasını bekliyorsunuz?

%

Şu anda satın aldığınız mal ve hizmetler için gelecekteki enflasyon oranı hakkında bugünkü ankete başlamadan önce bir beklentiniz var mıydı, yoksa beklentinizi bugünkü anket sırasında mı oluşturdunuz?

Bugünkü anketten önce oldukça kesin bir beklentim vardı.

Bugünkü anketten önce kabaca bir beklentim vardı.

Beklentimi bugünkü anket sırasında oluşturdum.

[Page break]

Resesyon olasılığı

Şimdi lütfen **Türkiye'nin Gayri Safi Yurtiçi Hasılası'nın (GSYİH)** gelecekteki gelişimi üzerine düşünün.

Türk ekonomisinin toplam çıktısı, belirli bir zaman dilimi boyunca Türkiye içinde üretilen tüm mal ve hizmetlerin değeri olarak tanımlanan **GSYİH (TL cinsinden)** ile ölçülür.

Resesyon, reel (fiyat ayarlı) GSYİH'nin düşmesi anlamına gelir, bu da belirli bir çeyrekte ekonominin bir önceki çeyreğe göre daha az mal ve hizmet ürettiği anlamına gelir. Reel GSYİH'nin düşüşü normalde reel gelir, istihdam, sanayi üretimi ve toptan-perakende satışlarda düşüşle yansır.

Türkiye'nin reel GSYİH'sinin 2025'in dördüncü çeyreğinde 2025'in üçüncü çeyreğine göre düşme olasılığının yüzde kaç olduğunu düşünüyorsunuz?

%

Gelecekteki resesyon olasılığı hakkında bugünkü ankete başlamadan önce bir beklentiniz var mıydı, yoksa beklentinizi bugünkü anket sırasında mı oluşturdunuz?

Bugünkü anketten önce oldukça kesin bir beklentim vardı.

Bugünkü anketten önce kabaca bir beklentim vardı.

Beklentimi bugünkü anket sırasında oluşturdum.

[Page break]

Türkiye borsasının gelecekteki getirisi

Şimdi, lütfen **Türkiye borsasının** gelecekteki gelişimi üzerine düşünün.

Türkiye borsasının getirisi, Türkiye borsasında listelenen tüm hisse senetlerini elinde bulunduran bir portföye yatırım yaparak belirli bir dönem boyunca elde ettiğiniz yüzde cinsinden değer değişimidir. Bu hem temettüleri hem de sermaye kazançlarını/kayıplarını içerir. Pozitif getiri değer artışı anlamına gelir; negatif getiri değer azaldığı anlamına gelir.

Türk hisse senedi piyasasının önümüzdeki 12 ay boyunca getirisinin ne kadar olacağını bekliyorsunuz?

%

Türkiye borsasının gelecekteki getirisi hakkında bugünkü ankete başlamadan önce bir beklentiniz var mıydı, yoksa beklentinizi bugünkü anket sırasında mı oluşturdunuz?

Bugünkü ankettten önce oldukça kesin bir beklentim vardı.

Bugünkü ankettten önce kabaca bir beklentim vardı.

Beklentimi bugünkü anket sırasında oluşturdum.

[Page break]

Gelecekteki Gayri Safi Yurtiçi Hasıla (GSYH)

Şimdi lütfen **Türkiye'nin Gayri Safi Yurtiçi Hasılası'nın (GSYİH)** gelecekteki gelişimi üzerine düşünün.

Türk ekonomisinin toplam çıktısı, belirli bir zaman dilimi boyunca Türkiye içinde üretilen tüm mal ve hizmetlerin değeri olarak tanımlanan **GSYİH (TL cinsinden)** ile ölçülür.

Türkiye'de yıllık GSYİH'nin önümüzdeki 12 ay boyunca ne kadar (yüzde olarak) değişmesini bekliyorsunuz?

Not: Pozitif bir oran yıllık GSYİH'nin artmasını beklediğiniz anlamına gelir; negatif bir oran azalmasını beklediğiniz anlamına gelir.

%

Gayri Safi Yurtiçi Hasıla'nın gelecekteki gelişimi hakkında bugünkü ankete başlamadan önce bir beklentiniz var mıydı, yoksa beklentinizi bugünkü anket sırasında mı oluşturdunuz?

Bugünkü ankettten önce oldukça kesin bir beklentim vardı.

Bugünkü ankettten önce kabaca bir beklentim vardı.

Partie principale

Ce qui suit constitue la partie principale de ce questionnaire, qui traite de **vos réflexions et de vos attentes** concernant l'avenir.

Dans certaines des questions suivantes, nous vous demanderons d'estimer le **pourcentage de chance** ou la **probabilité** qu'un événement se produise à l'avenir. Vos réponses peuvent aller de 0 à 100, 0 signifiant qu'il n'y a aucune possibilité et 100 signifiant que c'est complètement sûr.

Par exemple, des nombres tels que:

- 2 ou 5 pour cent peuvent indiquer « presque aucune chance »
- Environ 18 pour cent peuvent signifier « peu de chance »
- 47 ou 52 pour cent peuvent correspondre à « une chance à peu près égale »
- Environ 83 pour cent peuvent signifier « une très bonne chance »
- Une probabilité de 95 ou 98 pour cent peut signifier « presque certain »

Le taux futur de la facilité de dépôt de la BCE

Veuillez maintenant réfléchir au **taux futur de la facilité de dépôt de la BCE**.

Le **taux de la facilité de dépôt de la BCE** est le taux d'intérêt le plus important de l'économie, et il fait souvent l'objet de discussions dans les médias. Ce taux est fixé par la Banque centrale européenne (BCE). La valeur de ce taux influence le « coût » pour les banques de se procurer de la monnaie, ce qui agit sur les taux d'intérêt des produits financiers importants tels que les comptes d'épargne, les prêts à la consommation, les prêts immobiliers ou les crédits aux entreprises.

Selon vous, quel sera le **taux de la facilité de dépôt de la BCE** dans 12 mois?

%

Aviez-vous déjà une idée du **taux futur de la facilité de dépôt de la BCE** avant de commencer ce questionnaire, ou avez-vous formé votre opinion au cours de celui-ci?

J'ai formé mon opinion au cours du questionnaire d'aujourd'hui.

J'avais déjà une idée approximative avant ce questionnaire.

J'avais déjà une idée assez précise avant ce questionnaire.

[Page break]

Le taux d'inflation futur

Veuillez maintenant réfléchir à l'évolution future **des prix des biens et services en France**.

Le **taux d'inflation** correspond à la variation en pourcentage, sur une période donnée, du niveau général des prix des biens et des services. Il reflète le rythme auquel les prix augmentent (ou baissent) et indique les changements du pouvoir d'achat de la monnaie. Un taux d'inflation positif signifie que les prix augmentent ; un taux d'inflation négatif signifie que les prix diminuent.

Selon vous, quel sera le **taux d'inflation en France** au cours des 12 prochains mois?

%

Aviez-vous déjà une idée du **taux d'inflation futur en France** avant de commencer ce questionnaire, ou avez-vous formé votre opinion au cours de celui-ci?

J'ai formé mon opinion au cours du questionnaire d'aujourd'hui.

J'avais déjà une idée approximative avant ce questionnaire.

J'avais déjà une idée assez précise avant ce questionnaire.

[Page break]

Le taux d'inflation futur pour les biens et services que vous achetez actuellement

Veuillez maintenant réfléchir à l'évolution future des **prix des biens et services que vous achetez actuellement**.

Le **taux d'inflation pour les biens et services que vous achetez actuellement** correspond à la variation en pourcentage, sur une période donnée, du niveau des prix de ces biens et services. Il reflète le rythme auquel les prix que vous payez actuellement augmentent (ou baissent) et indique les changements du pouvoir d'achat de la monnaie. Un taux d'inflation positif signifie que les prix augmentent ; un taux d'inflation négatif signifie que les prix diminuent.

Selon vous, quel sera le taux d'inflation des biens et services que vous achetez actuellement au cours des 12 prochains mois?

%

Aviez-vous déjà une idée du taux d'inflation futur pour les biens et services que vous achetez actuellement avant de commencer ce questionnaire, ou avez-vous formé votre opinion au cours de celui-ci?

J'ai formé mon opinion au cours du questionnaire d'aujourd'hui.

J'avais déjà une idée approximative avant ce questionnaire.

J'avais déjà une idée assez précise avant ce questionnaire.

[Page break]

La probabilité d'une récession

Veuillez maintenant réfléchir à l'évolution future du **produit intérieur brut (PIB) de la France**.

La production totale de l'économie française est mesurée par le **PIB (en EUR)**, qui est défini comme la valeur de l'ensemble des biens et services produits en France pendant une période donnée.

Une **récession** se traduit par une baisse du PIB réel (corrigé de l'inflation), ce qui signifie que, sur un trimestre donné, l'économie produit moins de biens et services que durant le trimestre précédent. Une diminution du PIB réel s'accompagne généralement d'une baisse du revenu réel, de l'emploi, de la production industrielle et des ventes de gros et de détail.

Selon vous, quelle est la probabilité (en pourcentage) que le PIB réel de la France diminue au quatrième trimestre 2025 par rapport au troisième trimestre 2025?

%

Aviez-vous déjà une idée de la probabilité d'une récession future avant de commencer ce questionnaire, ou avez-vous formé votre opinion au cours de celui-ci?

J'ai formé mon opinion au cours du questionnaire d'aujourd'hui.

J'avais déjà une idée approximative avant ce questionnaire.

J'avais déjà une idée assez précise avant ce questionnaire.

[Page break]

Le rendement futur du marché boursier français

Veuillez maintenant réfléchir à l'évolution future du **marché boursier français**.

Le **rendement du marché boursier français** correspond à la variation en pourcentage de la valeur que vous obtenez, sur une période donnée, en investissant dans un portefeuille regroupant l'ensemble des actions cotées sur le marché boursier français. Il inclut à la fois les dividendes et les plus-values ou moins-values en capital. Un rendement positif signifie que la valeur augmente ; un rendement négatif signifie qu'elle diminue.

Selon vous, quel sera le rendement du marché boursier français au cours des 12 prochains mois?

%

Aviez-vous déjà une idée du marché boursier français avant de commencer ce questionnaire, ou avez-vous formé votre opinion au cours de celui-ci?

J'ai formé mon opinion au cours du questionnaire d'aujourd'hui.

J'avais déjà une idée approximative avant ce questionnaire.

J'avais déjà une idée assez précise avant ce questionnaire.

[Page break]

Le produit intérieur brut futur

Veuillez maintenant réfléchir à l'évolution future du **produit intérieur brut (PIB) de la France**.

La production totale de l'économie française est mesurée par le **PIB (en EUR)**, qui est défini comme la valeur de l'ensemble des biens et services produits en France pendant une période donnée.

De combien (en pourcentage) pensez-vous que le PIB annuel de la France évoluera au cours des 12 prochains mois?

Remarque: Un taux positif signifie que vous vous attendez à une augmentation du PIB annuel ; un taux négatif signifie que vous vous attendez à une diminution.

%

Aviez-vous déjà une idée du produit intérieur brut avant de commencer ce questionnaire, ou avez-vous formé votre opinion au cours de celui-ci?

J'ai formé mon opinion au cours du questionnaire d'aujourd'hui.

Willkommen!

Diese Studie ist ausschließlich für **Nutzerinnen und Nutzer eines Desktop-Computers (PC oder Mac)** konzipiert. Falls Sie die Studie auf einem Smartphone oder Tablet aufgerufen haben, wechseln Sie bitte zu einem Desktop-Computer und starten Sie die Studie erneut oder verlassen Sie die Umfrage.

Stimmen Sie der Verarbeitung Ihrer Daten zu?

Ziel dieser Studie ist es, besser zu verstehen, wie Menschen wichtige wirtschaftliche Entscheidungen treffen und warum sie sich so entscheiden.

Teilnehmende beantworten eine Reihe von Fragen zu ihren Ansichten. Ihre Teilnahme ist vollständig freiwillig. Sie können die Teilnahme jederzeit und ohne Angabe von Gründen beenden, indem Sie einfach Ihren Browser schließen. Bitte beachten Sie jedoch: Eine Auszahlung ist nur möglich, wenn Sie die Umfrage vollständig abschließen.

Bei weiteren Fragen wenden Sie sich bitte an: wohlfart@wiso.uni-koeln.de

☐ Ich habe die obigen Informationen gelesen und willige in die Teilnahme an dieser Studie ein.

☐ Ich möchte nicht teilnehmen.

Die erste Frage

Bevor wir starten, führen wir einen kurzen Test durch, um sicherzustellen, dass Sie die Anweisungen in dieser Umfrage aufmerksam lesen.

Um zu bestätigen, dass Sie genau aufpassen, ignorieren Sie bei der nächsten Frage bitte Ihren tatsächlichen Gemütszustand. Befolgen Sie stattdessen die folgenden Anweisungen und wählen Sie drei Antwortoptionen, nämlich:

Wählen Sie die Option, die das Wort „entspannt“ enthält.

Wählen Sie die dritte Option in der Liste.

Wählen Sie die erste Option in der Liste.

Welche der folgenden Aussagen beschreibt Ihre aktuelle Stimmung?

Ich fühle mich konzentriert

Ich fühle mich müde

Ich fühle mich glücklich

Ich fühle mich niedergeschlagen

Ich fühle mich entspannt

Ich fühle mich gestresst

Keine der oben genannten

Ich möchte keine Angabe machen

Hauptteil

Im Folgenden beginnt der Hauptteil dieser Umfrage. Er beschäftigt sich mit **Ihren Vorstellungen und Erwartungen** darüber, wie die Zukunft aussehen könnte.

In einigen der nächsten Fragen werden wir Sie bitten, über die **prozentuale Wahrscheinlichkeit** bestimmter zukünftiger Ereignisse nachzudenken. Ihre Antworten können zwischen 0 und 100 liegen, wobei 0 bedeutet, dass es absolut keine Chance gibt, und 100 bedeutet, dass es ganz sicher eintreten wird.

Zum Beispiel bedeuten Angaben wie:

- 2 oder 5 Prozent: „so gut wie keine Chance“
- etwa 18 Prozent: „eher geringe Chance“
- 47 oder 52 Prozent: „ziemlich ausgeglichene Chance“
- etwa 83 Prozent: „sehr gute Chance“
- 95 oder 98 Prozent: „so gut wie sicher“

Der zukünftige Leitzins der EZB

Bitte denken Sie nun über den zukünftigen **Leitzins der Europäischen Zentralbank (EZB)** nach.

Der **Leitzins der EZB** ist der bedeutendste Zinssatz im Euroraum, und er wird häufig in den Nachrichten diskutiert. Der Zinssatz wird von der Europäischen Zentralbank (EZB) festgelegt. Sein Wert beeinflusst, wie „teuer“ es für Banken ist, Geld zu erhalten, und wirkt sich damit auf die Zinssätze wichtiger Finanzprodukte aus, wie z. B. Sparguthaben, Konsumentenkredite, Hypotheken oder Unternehmenskredite.

Was schätzen Sie, wie hoch der Leitzins der EZB in 12 Monaten sein wird?

%

Hatten Sie bereits vor Beginn der heutigen Umfrage eine Erwartung über den zukünftigen Leitzins der EZB, oder haben Sie Ihre Erwartung während der heutigen Umfrage gebildet?

Ich habe meine Erwartung während der heutigen Umfrage gebildet.

Ich hatte bereits vor der heutigen Umfrage eine ungefähre Erwartung.

Ich hatte bereits vor der heutigen Umfrage eine ziemlich genaue Erwartung.

[Page break]

Die zukünftige Inflationsrate

Bitte denken Sie nun über die **Preisentwicklung für Waren und Dienstleistungen in Deutschland** nach.

Die **Inflationsrate** beschreibt die prozentuale Veränderung des allgemeinen Preisniveaus für Waren und Dienstleistungen innerhalb eines bestimmten Zeitraums. Sie gibt an, wie stark Preise steigen (oder fallen), und zeigt damit Veränderungen der Kaufkraft des Geldes an. Eine negative Inflationsrate wird allgemein als Deflation bezeichnet.

Was schätzen Sie, wie hoch die Inflationsrate in Deutschland in den nächsten 12 Monaten sein wird?

%

Hatten Sie bereits vor Beginn der heutigen Umfrage eine Erwartung über die zukünftige Inflationsrate, oder haben Sie Ihre Erwartung während der heutigen Umfrage gebildet?

Ich habe meine Erwartung während der heutigen Umfrage gebildet.

Ich hatte bereits vor der heutigen Umfrage eine ungefähre Erwartung.

Die zukünftige Inflationsrate für die Waren und Dienstleistungen, die Sie derzeit kaufen

Bitte denken Sie nun über die zukünftige **Preisentwicklung der Waren und Dienstleistungen** nach, die **Sie** derzeit kaufen.

Die **Inflationsrate für die Waren und Dienstleistungen, die Sie derzeit kaufen**, beschreibt die prozentuale Veränderung des Preisniveaus dieser Waren und Dienstleistungen über einen bestimmten Zeitraum. Sie zeigt an, wie stark die Preise für die Waren und Dienstleistungen, die Sie derzeit kaufen, steigen (oder fallen), und damit Veränderungen der Kaufkraft des Geldes. Eine positive Inflationsrate bedeutet, dass die Preise steigen; eine negative Inflationsrate bedeutet, dass die Preise sinken.

Wie hoch schätzen Sie die Inflationsrate für die Waren und Dienstleistungen, die Sie derzeit kaufen, in den nächsten 12 Monaten?

%

Hatten Sie bereits vor Beginn der heutigen Umfrage eine Erwartung über die zukünftige Inflationsrate für die Waren und Dienstleistungen, die Sie derzeit kaufen, oder haben Sie Ihre Erwartung während der heutigen Umfrage gebildet?

Ich habe meine Erwartung während der heutigen Umfrage gebildet.

Ich hatte bereits vor der heutigen Umfrage eine ungefähre Erwartung.

Ich hatte bereits vor der heutigen Umfrage eine ziemlich genaue Erwartung.

[Page break]

Die Wahrscheinlichkeit einer Rezession

Bitte denken Sie nun über die zukünftige Entwicklung des deutschen Bruttoinlandsprodukts (BIP) nach.

Die gesamte Wirtschaftsleistung der deutschen Volkswirtschaft wird durch das **BIP** (in EUR) gemessen. Das BIP ist definiert als der Wert aller Güter und Dienstleistungen, die innerhalb Deutschlands in einem bestimmten Zeitraum produziert werden.

Eine **Rezession** bedeutet einen Rückgang des realen (preisbereinigten) BIP. Das heißt, dass die Wirtschaft in einem bestimmten Quartal weniger Güter und Dienstleistungen produziert als im vorangegangenen Quartal. Ein Rückgang des realen BIP zeigt sich in der Regel in einem Rückgang des Realeinkommens, der Beschäftigung, der Industrieproduktion sowie des Groß- und Einzelhandels.

Wie hoch schätzen Sie die prozentuale Wahrscheinlichkeit ein, dass das reale deutsche BIP im vierten Quartal 2025 im Vergleich zum dritten Quartal 2025 sinkt?

%

Hatten Sie bereits vor Beginn der heutigen Umfrage eine Erwartung über die Wahrscheinlichkeit einer zukünftigen Rezession, oder haben Sie Ihre Erwartung während der heutigen Umfrage gebildet?

Ich habe meine Erwartung während der heutigen Umfrage gebildet.

Ich hatte bereits vor der heutigen Umfrage eine ungefähre Erwartung.

Ich hatte bereits vor der heutigen Umfrage eine ziemlich genaue Erwartung.

[Page break]

Die zukünftige Rendite des deutschen Aktienmarktes

Bitte denken Sie nun über die zukünftige Entwicklung des **deutschen Aktienmarktes** nach.

Die **Rendite des deutschen Aktienmarktes** ist die prozentuale Wertveränderung, die Sie innerhalb eines bestimmten Zeitraums durch eine Investition in ein Portfolio erhalten, das sämtliche am deutschen Aktienmarkt gelisteten Aktien enthält. Sie umfasst sowohl Dividenden als auch Kursgewinne bzw. -verluste. Eine positive Rendite bedeutet, dass der Wert steigt; eine negative Rendite bedeutet, dass der Wert sinkt.

Was schätzen Sie, wie hoch die Rendite des deutschen Aktienmarktes in den nächsten 12 Monaten sein wird?

%

Hatten Sie bereits vor Beginn der heutigen Umfrage eine Erwartung über die zukünftige Rendite des deutschen Aktienmarktes, oder haben Sie Ihre Erwartung während der heutigen Umfrage gebildet?

The first question

Before starting, we have another quick check to ensure you're a person who carefully reads survey instructions.

To confirm you're paying close attention, please ignore your actual state of mind for the next question. Instead, follow the instructions below and select three response options, namely:

Select the option that includes the word "relaxed."

Select the third option in the list.

Select the first option listed.

Which of the following describes your current state of mind?

I feel focused

I feel tired

I feel happy

I feel low

I feel relaxed

I feel stressed

None of the above

I prefer not to answer

[Page break]

Daylight saving time

Please explain: What is your opinion about the yearly switch to daylight saving time? Do you like or dislike it? Please use about 15-30 words.

[Page break]

About this study

This study is about your views on and beliefs about the future stock market return in the UK.

In some of the following questions, we will ask you to think about the **percent chance** or **probability** of something happening in the future. Your answers can range from 0 to 100, where 0 means there is absolutely no chance, and 100 means that it is absolutely certain.

For example, numbers like:

2 and 5 percent may indicate "almost no chance"

18 percent or so may mean "not much chance"

47 or 52 percent chance may be a "pretty even chance"

83 percent or so may mean a "very good chance"

95 or 98 percent chance may be "almost certain"

Condition: Low anchor

The future return of the UK stock market

Please think about the future development of the **UK stock market**.

The **return of the UK stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the UK stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

For example, a return of 2% means that £1,000 invested today will yield £1,020 in twelve months.

What do you expect the return of the UK stock market to be over the next 12 months?

Please provide your response as percentage (for example, "2%" as in the example above).

 %

Did you have an expectation about the future return of the UK stock market already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

Condition: High anchor

The future return of the UK stock market

Please think about the future development of the **UK stock market**.

The **return of the UK stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the UK stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

For example, a return of 20% means that £1,000 invested today will yield £1,200 in twelve months.

What do you expect the return of the UK stock market to be over the next 12 months?

Please provide your response as percentage (for example, "20%" as in the example above).

 %

Did you have an expectation about the future return of the UK stock market already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

Investment decision

Your investment

Imagine you want to **save** an additional £10,000 for the next 12 months. What would you do if you had the following choice?

Two investment options are available:

- **Investing in a stock index fund that follows the UK stock market.** The return on your investment in this stock index fund will be the actual return of the UK stock market over the next 12 months.
- **Investing in a savings bond that pays 3 percent interest per year for sure.** The return on your investment in this savings bond will be 3 percent for sure.

Please decide. How much of the £10,000 would you invest in the stock index fund, and how much in the savings bond?

(Note: The sum of the investments must amount to £10,000).

My investment in the stock index fund	£ 0
My investment in the savings bond	£ 0
Total	£ 0

About this study

This study is about your views on and beliefs about the inflation rate in the US.

In some of the following questions, we will ask you to think about the **percent chance** or **probability** of something happening in the future. Your answers can range from 0 to 100, where 0 means there is absolutely no chance, and 100 means that it is absolutely certain.

For example, numbers like:

2 and 5 percent may indicate “almost no chance”

18 percent or so may mean “not much chance”

47 or 52 percent chance may be a “pretty even chance”

83 percent or so may mean a “very good chance”

95 or 98 percent chance may be “almost certain”

[Page break]

Condition: Low anchor

The future inflation rate

Please think about the future development of **prices for goods and services in the US**.

The **inflation rate** is the percent change over a given period in the general price level of goods and services. It reflects the rate at which prices are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

For example, an inflation rate of 2% means that a bundle of goods and services that cost \$1,000 today will cost \$1,020 in twelve months.

What do you expect the US inflation rate to be over the next 12 months?

Please provide your response as percentage (for example, "2%" as in the example above).

 %

Did you have an expectation about the future US inflation rate already before starting today's survey, or did you form your expectation during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation during today's survey.

Condition: High anchor

The future inflation rate

Please think about the future development of **prices for goods and services in the US**.

The **inflation rate** is the percent change over a given period in the general price level of goods and services. It reflects the rate at which prices are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

For example, an inflation rate of 20% means that a bundle of goods and services that cost \$1,000 today will cost \$1,200 in twelve months.

What do you expect the US inflation rate to be over the next 12 months?

Please provide your response as percentage (for example, "20%" as in the example above).

 %

Two final questions before we start

Finally, please explain: What is your opinion about the yearly switch to daylight saving time? Do you like or dislike it? Please use about 15-30 words.

[Page break]

In which year were you born?

[Page break]

Main part

What follows is the main part of this survey which is about your **thoughts and expectations regarding how the future might look**.

Illustrative examples

Each question begins with a short introduction to the topic. You will provide your answers in numerical form. To help you become familiar with the numerical response format, each introduction also contains an **illustrative example**. Importantly, the example values are randomly selected and help demonstrate the numerical response format. They are not forecasts or expert estimates, but randomly selected numbers.

[Page break]

Condition: Low anchor

The likelihood of a future recession

Now, please think about the future development of the **UK Gross Domestic Product**.

The total output of the UK economy is measured by the **Gross Domestic Product (GDP)**, which is defined as the value of all goods and services produced within the UK over a specific period of time.

A **recession** entails a fall of real (price-adjusted) GDP which means that in a given quarter the economy produces fewer goods and services than in the preceding quarter. A fall of real GDP is normally reflected in a decline of real income, employment, industrial production, and wholesale-retail sales.

Illustrative example: A 10% chance that the UK enters a recession in the second quarter of 2026 means that there is a 10% chance that real UK GDP will fall in the second quarter of 2026 relative to the first quarter of 2026.

What do you think is the percent chance that real UK GDP will fall in the second quarter of 2026 relative to the first quarter of 2026?

Please provide your response as percentage (for example, "10%" as in the example above).

 %

Did you have an expectation about the likelihood of a future recession in the UK already before starting today's survey, or did you form your expectation only during today's survey?

I formed my expectation only during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

Condition: High anchor

The likelihood of a future recession

A **recession** entails a fall of real (price-adjusted) GDP which means that in a given quarter the economy produces fewer goods and services than in the preceding quarter. A fall of real GDP is normally reflected in a decline of real income, employment, industrial production, and wholesale-retail sales.

Illustrative example: A 70% chance that the UK enters a recession in the second quarter of 2026 means that there is a 70% chance that real UK GDP will fall in the second quarter of 2026 relative to the first quarter of 2026.

What do you think is the percent chance that real UK GDP will fall in the second quarter of 2026 relative to the first quarter of 2026?

Please provide your response as percentage (for example, "70%" as in the example above).

 %

Did you have an expectation about the likelihood of a future recession in the UK already before starting today's survey, or did you form your expectation only during today's survey?

I had a pretty precise expectation already before today's survey.

I had a rough expectation already before today's survey.

I formed my expectation only during today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **likelihood of a future recession in the UK will be 10%**. How **confident** are you in this estimate?

What do you think is the probability that the actual likelihood of a future recession in the UK will be somewhere between **5% and 15%**?

 %

[Page break]

Condition: Low anchor

The future annual percentage rates on credit cards

Now, please think about the future **average annual percentage rate (APR)** on credit cards in the UK.

The **annual percentage rate on credit card debt** is the interest rate that consumers pay when carrying a balance on their credit card over one full year. This rate varies based on individual creditworthiness. Here, we are interested in the average rate across all credit card holders in the UK.

Illustrative example: An **APR of 5%** means that £1,000 in credit card debt carried for one year will result in £50 in interest charges over the year.

What do you expect the average annual percentage rate on credit cards in the UK to be in 12 months from now?

Please provide your response as percentage (for example, "5%" as in the example above).

 %

Did you have an expectation about the future annual percentage rates on credit cards in the UK already before starting today's survey, or did you form your expectation only during today's survey?

I formed my expectation only during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **future annual percentage rates on credit cards in the UK will be 35%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future annual percentage rates on credit cards in the UK will be somewhere between **34% and 36%**?

 %

[Page break]

Condition: Low anchor

The future stock market returns

Now, please think about the future development of the **UK stock market**.

The **return of the UK stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the UK stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

Illustrative example: A return of 2% means that £1,000 invested today will yield £1,020 in twelve months.

What do you expect the return of the UK stock market to be over the next 12 months?

Please provide your response as percentage (for example, "2%" as in the example above).

 %

Did you have an expectation about the future UK stock market return already before starting today's survey, or did you form your expectation only during today's survey?

I formed my expectation only during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

 %

[Page break]

Condition: Low anchor

Wealth inequality: share of wealth of top 10%

Now, please think about **wealth inequality in the UK**.

Wealth inequality can be measured by the **share of total net wealth owned by the wealthiest 10% of households** in the United Kingdom.

Illustrative example: A share of **25%** means that out of every £1000 of total net wealth in the UK, about £250 is owned by the wealthiest 10% of households.

What do you think is the share of total net wealth owned by the wealthiest 10% of UK households?

Please provide your response as percentage (for example, "25%" as in the example above).

 %

Did you have an expectation about wealth inequality in the UK already before starting today's survey, or did you form your expectation only during today's survey?

I formed my expectation only during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

Condition: High anchor

Your confidence

Previously, you stated the expectation that the future US inflation over the next 12 months rate will be **3%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future US inflation rate will be somewhere between **2% and 4%**?

 %

9 Qualitative interviews: Reported expectations

Introduction

Welcome!

This study is designed for **computer (PC or Mac) only**. If you are accessing this study on a smartphone or tablet, switch to a computer and enter the study again, or leave the survey.

Do you consent to the processing of your data and our privacy policy?

► Click **here** to display the full privacy policy.

In this study, you will participate in an interview with an AI chatbot. The AI chatbot's role is solely to discuss and understand your viewpoints on various subjects. Your responses are processed via OpenAI's API, a secure and encrypted technological framework. Importantly, your data won't contribute to model training. OpenAI will store your data for a maximum of 30 days for security reasons, after which they will permanently delete it.

Declaration of Consent

I hereby consent to the processing of my personal data to conduct the study to improve the understanding of human behavior in an economic context and also to the disclosure of my personal data to research institutions, universities, or laboratories. I can withdraw my consent at any time. I agree that my consent also extends to special categories of personal data.

I have read the above and consent to take part in this study

I do not wish to participate

Please follow the instructions in the audio to answer the question below.
This is to identify bots, as they cannot interpret audio easily.

Your answer:

[Page break]

The next question is about the following problem. In questionnaires like ours, sometimes there are participants who do not carefully read the questions and just quickly click through the survey. This means that there are a lot of random answers which compromise the results of research studies. To show that you read our questions carefully, please choose both "Very strongly interested" and "Not at all interested" as your answer in this question.

How interested are you in sports?

Very strongly interested

Very interested

A little bit interested

Almost not interested

Not at all interested

[Page break]

What is your favorite month of the year? Please explain in about 15 to 30 words.

[Page break]

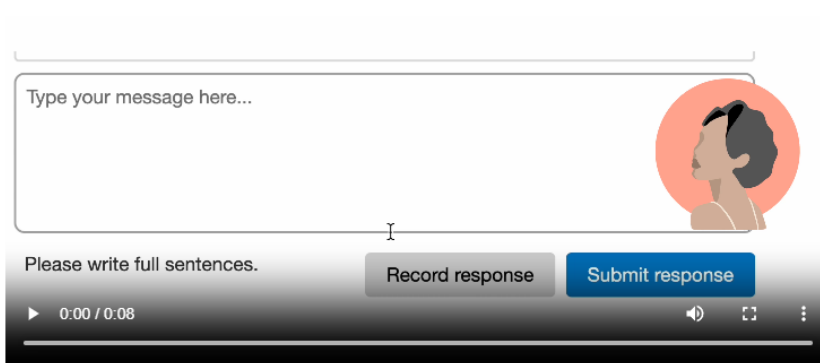

Interview

In this study, you'll participate in an interview with a chatbot.

This interview is a very important part of the study. Please answer thoughtfully and take your time.

You have two options to answer the questions:

1. You type the answers using your **keyboard**.
2. You use the **voice recording** feature, see how it works in the video below.

[Page break]

Beliefs

The future inflation rate

Please think about the future development of **prices for goods and services in the US**.

The **inflation rate** is the percent change over a given period in the general price level of goods and services. It reflects the rate at which prices are rising (or falling) and indicates changes in the purchasing power of money. A positive inflation rate means that prices increase; a negative inflation rate means that prices decrease.

What do you expect the US inflation rate to be over the next 12 months?

%

Did you have an expectation about the future US inflation rate already before starting today's survey, or did you form your expectation only during today's survey?

I formed my expectation only during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Interview topic

On the next page, you will participate in an interview with an AI chatbot about how you formed your expectation about the future inflation rate.

To ensure that the interview is as meaningful as possible, it's important that your responses provide sufficient detail. Please aim to write full sentences in your answers to allow for a meaningful conversation. There are no right or wrong answers.

We expect the interview to take about **10 minutes** to complete on average.

[Page break]

Interview

You previously stated that you expect the US inflation rate to be 14% over the next 12 months.

Please let me know how you came up with your prediction of future inflation. What was the main consideration underlying your prediction?

Start typing or recording...

Please confirm

Response quality is important for the quality of this research project. For this reason, we will review responses and reject respondents who

- speed through the survey
- submit invalid data
- use bots or artificial intelligence (AI, e.g. ChatGPT or Google Gemini)

You don't need these AI tools anyway. This survey is all about your own views and thoughts.

Please respond carefully to this survey.

I confirm

[Page break]

The first question

Before starting, we have another quick check to ensure you're a person who carefully reads survey instructions.

To confirm you're paying close attention, please ignore your actual state of mind for the next question. Instead, follow the instructions below and select three response options, namely:

Select the option that includes the word "relaxed."

Select the third option in the list.

Select the first option listed.

Which of the following describes your current state of mind?

I feel focused

I feel tired

I feel happy

I feel low

I feel relaxed

I feel stressed

None of the above

I prefer not to answer

[Page break]

Daylight saving time

Please explain: What is your opinion about the yearly switch to daylight saving time?
Do you like or dislike it? Please use about 15-30 words.

About this study

This study is about the UK economy.

In some of the following questions, we will ask you to think about the **percent chance** or **probability** of something happening in the future. Your answers can range from 0 to 100, where 0 means there is absolutely no chance, and 100 means that it is absolutely certain.

For example, numbers like:

2 and 5 percent may indicate "almost no chance"

18 percent or so may mean "not much chance"

47 or 52 percent chance may be a "pretty even chance"

83 percent or so may mean a "very good chance"

95 or 98 percent chance may be "almost certain"

[Page break]

Beliefs

The future return of the UK stock market

Now, please think about the future development of the **UK stock market**.

The **return of the UK stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the UK stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

What do you expect the return of the UK stock market to be over the next 12 months?

Please provide your response as percentage.

 %

Did you have an expectation about the future return of the UK stock market already before starting today's survey, or did you form your expectation during today's survey?

I formed my expectation during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **future return of the UK stock market over the next 12 months will be 23%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future return of the UK stock market will be somewhere between **22% and 24%**?

 %

[Page break]

Condition: Low default

An investment decision

In the following, we ask you to make a decision on how you would invest £100 for the coming 12 months.

You have the chance to earn your investment outcome as bonus payment.

Upon completion of the research project, we will randomly select ten participants who will receive a payout equal to the value of their investment after 12 months. If you are selected, this payout will depend on your investment decision, so please consider your decision carefully. The payout will be made in 12 months (plus processing time). You will be contacted and invited to a bonus study in which you will receive your bonus payment.

Two investment options are available:

- **Investing in a stock index fund that follows the UK stock market.** The return on your investment in this stock index fund will be the actual return of the UK stock market over the next 12 months.
- **Investing in a savings bond that pays 3 percent interest per year for sure.** The return on your investment in this savings bond will be 3 percent for sure.

Default allocation (if you make no changes):

- You invest £20 in the UK stock index fund
- You invest £80 in the savings bond

What would you like to do?

Keep the default allocation: Invest £20 in stock index fund and £80 in savings bond

Set my own allocation

(If default is overruled:)

What would you like to do?

Keep the default allocation: Invest £20 in stock index fund and £80 in savings bond

Set my own allocation

Please decide. How much of the £100 would you invest in the stock index fund, and how much in the savings bond?

(Note: The sum of the investments must amount to £100).

My investment in the stock index fund	£ 20
My investment in the savings bond	£ 80
Total	£ 100

Condition: high default

Total	£	100

Dictator game

Another decision

In the following, we ask you to make a decision on how you would allocate £10 between yourself and another anonymous participant.

You have the chance to earn your allocation as a bonus payment.

Upon completion of the research project, we will randomly select ten participants whose decisions will be implemented for payment, along with ten additional participants who will receive any amounts shared with them. If you are selected, both your bonus payment and the bonus payment of the participant matched with you will depend on how you chose to divide the £10. The payout will be made after the end of the project (plus processing time).

Two allocation options are available:

- **Keeping money for yourself.** You may choose to keep any part of the £10.
- **Giving money to another participant.** You may choose to give any part of the \$10 to the other participant.

Default allocation (if you make no changes):

- You keep £10 for yourself
- You give £0 to the other participant

What would you like to do?

Keep the default allocation: Keep £10. Share £0.

Set my own allocation

(If default is overruled:)

What would you like to do?

Keep the default allocation: Keep £10. Share £0.

Set my own allocation

Please decide. How much of the £10 would you keep for yourself, and how much would you give to the other participant?

(Note: The sum must amount to £10).

Keep for myself	£	10
Share with the other participant	£	0
Total	£	10

Expectations

The future return of the US stock market

Please think about the future development of the **US stock market**.

The **return of the US stock market** is the change in value, in percent, that you receive over a given period from investing in a portfolio that holds all stocks listed on the US stock market. It includes both dividends and capital gains/losses. A positive return means that the value increases; a negative return means that the value decreases.

What do you expect the return of the US stock market to be over the next 12 months?

 %

Did you have an expectation about the future return of the US stock market already before starting today's survey, or did you form your expectation only during today's survey?

I formed my expectation only during today's survey.

I had a rough expectation already before today's survey.

I had a pretty precise expectation already before today's survey.

[Page break]

Your confidence

Previously, you stated the expectation that the **future return of the US stock market over the next 12 months will be 25%**. How **confident** are you in this estimate?

What do you think is the probability that the actual future return of the US stock market will be somewhere between **21% and 29%**?

 %

[Page break]

Background characteristics

Please think of all of your household's financial assets. This includes both retirement accounts (401(k)s, IRAs, Keogh accounts, etc.) and financial assets outside of retirement accounts (bank accounts, brokerage accounts, investment accounts etc.). Please do NOT include the value of any real estate property or any private business that your household owns.

What is the current total value of your household's financial assets?

[Page break]

About what percent of your household's financial assets (see previous question) is currently invested in stocks or stock mutual funds?

Type in "0" if your households currently does not own stocks or stock mutual funds.

 %

[Page break]

Suppose you had \$100 in a savings account and the interest rate was 2% per year. After 5 years, how much do you think you would have in the account if you left the money to grow?

More than \$102

Exactly \$102

Less than \$102

Do not know

Imagine that the interest rate on your savings account was 1% per year and inflation was 2% per year. After 1 year, how much would you be able to buy with the money in this account?

More than today

Exactly the same

Less than today

Do not know

Please tell me whether this statement is true or false: "Buying a single company's stock usually provides a safer return than a stock mutual fund."

True

False
